

Resource Taxes and Savings

Money Creation	endowments	labor									
types of labor	commercial				government				students		
costs to recover	major assets		internal	inventories	major assets		internal	inventories	labor		
	acquisition	depreciation	inputs		acquisition	depreciation	inputs				
recovery method	resource taxes	none	prices	none	none	resource taxes	none	resource taxes	resource taxes		
Savings (excess creation)	savings			savings		savings		savings			

notes:

- internal inputs include all goods & services consumed internally, plus internal labor costs
- commercial internal inputs are priced directly into consumer goods & services (final prices)
- government internal inputs are not priced directly into final prices, so these costs must be recovered via resource taxes
- endowments & student salaries must also be added to final prices using resource taxes
- all resource taxes are added at the source, by the producer

- major assets (like real estate, vehicles & equipment) are transferred without payment... users pay only depreciation costs
- wages paid to workers to produce major assets and inventories will exceed the depreciation costs added to final prices
- this excess income will allow and sustain stable, interest-free savings
